MANGO TREE · COPY-PASTA FINDER · HOW IT SHOULD WORK

Maya's first time finding copy-pasta, with Mango Tree as her guide

Proto-persona from the literature review. Not yet validated with interviews.

WHO

Maya, reporter

Comfortable with spreadsheets. Doesn't code. Has never downloaded posts from a social site.

WHAT SHE ALREADY KNOWS

Mango Tree is a free tool people use to check whether posts were copied. She has never used it.

SCENARIO (ILLUSTRATIVE)

At 1:00 pm her editor forwards dozens of posts on X about a school-board vote that all say nearly the same thing. "Is this coordinated? I need to know by 5."

WHAT SHE WANTS

Proof she can show her editor.

"Tell me what to do, step by step. Don't make me learn anything technical."

	1. Getting started (1:00 to 1:10 pm)				**2. Getting the posts** (1:10 to 1:45 pm)			
STEP	1 **Notices something** Social feed	2 **Opens Mango Tree** Home page	3 **Gets a quick welcome** Welcome	4 **Picks the Copy-Pasta Finder** Tools	5 **Chooses where the posts are** Pick a site	6 **Chooses how to get them** Ways to get posts	7 **Gets the posts from the site** Step-by-step guide	8 **Adds her posts** Add your posts
WHAT SHE DOES	Sees dozens of posts saying nearly the same thing. Her editor asks if it's coordinated.	Goes to Mango Tree and reads the first line.	Sees the three parts ahead and what she'll need.	Sees the tools as cards and picks the Copy-Pasta Finder.	Picks X, where she saw the posts. Each site shows how much effort it takes.	Sees the recommended way to get posts from X, plus other ways if she wants them. Picks the recommended way. Bluesky shortcut: Mango Tree gets the posts itself. She skips to step 9.	Follows picture-by-picture steps for X and saves the posts as a file.	Comes back and drops the file in, exactly as she downloaded it.
WHAT SHE'S THINKING	*"This sounds copied. Mango Tree checks this kind of thing."*	*"Okay, I'm in the right place."*	*"I can see what's coming. It doesn't look hard."*	*"That's my question exactly."*	*"Good, it tells me what I'm in for."*	*"Good to know there are other options. I'll go with the recommended one."*	*"Am I doing this right? Am I even allowed to?"*	*"Do I have to fix this file first? No? Good."*
SCREEN IDEA	Outside Mango Tree No screen. She already knows the name.	**Find out whether lots of accounts posted the same words.** Find copied posts See an example One line, one big button, an example.	**Here's how it works** 1 · Get your posts 2 · Find copy-pasta 3 · See what we found Skip One screen, three parts, skippable.	**What do you want to find?** **Copy-Pasta Finder** Finds posts where many accounts used the same words. Hashtags Ready More Coming soon Tool cards, one-line description each.	**Where did you see the posts?** Bluesky Effort: none X Effort: medium Instagram Effort: medium TikTok Effort: medium Telegram Effort: low Facebook Not possible for most Effort means how much you do yourself. Site cards with the effort level on each. Real logos in the build.	**Ways to get posts from X** **Recommended: free browser add-on** Effort: medium · about 4 steps · free Other ways (2) Paid data service · Effort: low · costs money Ask a research partner · Effort: none · takes days One clear recommendation. Other ways stay folded until she opens them.	**Getting posts from X** Step 2 of 4 Picture of this step Email me these steps Next One step at a time, with a picture and a way back.	**Drop your file here** Exactly as you downloaded it. No cleanup needed. Got stuck? Go back to the steps One drop zone. No fixing the file.
HOW MANGO TREE GUIDES HER	Nothing yet. She already knows Mango Tree checks for copied posts.	Leads with what it does, in her words. "Find out whether lots of accounts posted the same words."	Shows the whole path up front. "1. Get your posts 2. Find copy-pasta 3. See what we found"	Names each tool for what it finds. "Copy-Pasta Finder: Finds posts where many accounts used the same words."	Shows the effort for each site before she starts, on one scale: none, low, medium, not possible. "Effort means how much you do yourself."	Recommends one way, and tells her other ways exist, with the effort and cost of each. They stay folded so she isn't overwhelmed. "Recommended for X: a free browser add-on. Medium effort, about 4 steps."	One page of steps per site, with pictures, what's allowed, and a way back. "Step 2 of 4: Open X in Firefox and search for the posts. The add-on saves them as you scroll."	Reads the file the way the add-on made it. "Drop the file exactly as you downloaded it. No cleanup needed."
WHERE SHE COULD GET STUCK	Not sure Mango Tree fits her question.	The first screen asks her to "create a project".	A long tour.	Tool names that sound technical.	The posts are on Facebook, which doesn't let most people download them.	Too many options shown at once.	The site changes and the steps go out of date. She doesn't come back.	A file from a tool Mango Tree doesn't recognize.

	3. Making sure they're the right posts (1:45 to 2:00 pm)			**4. Understanding what was found** (2:00 to 2:40 pm)			**5. Taking it to her editor** (2:40 to 3:00 pm)	
STEP	9 **Pastes a post she noticed** What did you notice?	10 **Confirms these are the right posts** Is this it?	11 **Mango Tree looks for copies** Progress	12 **Sees the main finding** Findings	13 **Looks inside a group** Group detail	14 **Reads what it can't prove** Group detail	15 **Downloads a summary** Summary	16 **Decides what to do next** Her story
WHAT SHE DOES	Copies one of the posts she noticed, straight from X, and pastes it in word for word.	Reads a few of her posts that match, and says yes or not quite.	Clicks "Find copied posts" and waits about a minute.	Reads the top line, then a short list of copy-pasta groups, strongest first.	Sees each post on a timeline, who posted it, when, and what the accounts have in common.	Reads the note beside the group.	Previews a one-page summary and downloads it for her editor.	Decides to report it, dig further, or drop it.
WHAT SHE'S THINKING	*"I'll copy the exact post, not describe it."*	*"Yes, that's it."*	*"Is it working?"*	*"There it is."*	*"They all landed within minutes. That isn't chance."*	*"Right. This doesn't prove who's behind it."*	*"My editor can see exactly what I saw."*	*"I know what I can say, and what I can't."*
SCREEN IDEA	**Copy and paste one post you noticed, word for word** Paste the exact post here Don't retype or describe it. We look for the exact words, so a copy works best. Or pick one of your posts Not sure? Look for anything copied Asks for an exact copy and says why, in one line.	**Are these the posts you're asking about?** @citizen_jo · Oct 22 @localvoice · Oct 22 Yes, that's it Not quite A few real posts, then yes or not quite.	**Finding copied posts** Now checking when these were posted... About 1 minute left A progress bar and one plain line. Nothing to choose.	**214 accounts posted the same 9-word sentence, most within 4 minutes.** Same words Same time Same words Headline first, then groups, strongest first.	**Group 1 · 214 accounts** Timeline, one dot per post, then the real posts.	**What this means** **Other explanations** A note beside every group, not hidden in help.	Download summary (PDF) One-page preview, then download.	**What next?** See which hashtags these accounts used Save this search Start a new search Next-step cards.
HOW MANGO TREE GUIDES HER	Asks for an exact copy, and says why. If the words aren't found, it says so. "We couldn't find these exact words. Try copying the post again, straight from X."	"Right" means these are the posts she's asking about. "Not quite" lets her try another. "Are these the posts you're asking about?"	Checks all three signals for her: same words, same time, look-alike accounts. She doesn't choose. "Now checking when these were posted..."	One sentence before any chart. Groups ranked by how many signals they show. "214 accounts posted the same 9-word sentence, most within 4 minutes."	Every group opens to the real posts. "Most of these accounts were created the same week."	States the limits right beside the finding. "Matching words don't prove someone organized this. Campaign slogans and shared quotes repeat too."	The posts, the counts, the timeline, how Mango Tree looked, and its limits, in plain words. "Download summary (PDF)"	Suggests a next look. "Next: see which hashtags these accounts used."
WHERE SHE COULD GET STUCK	She retypes or sums up the post, so the words don't match.	The matches are about something else.	A long wait with no sign of progress.	A chart she has to decode first.	Too many accounts to look through.	Skipping the note.	Terms her editor won't know.	Pressure to say more than the evidence shows.

HOW SHE FEELS

Solid line: X, Instagram, TikTok or Telegram (step-by-step guide). Dashed line: Bluesky, where Mango Tree gets the posts.

KEY MOMENTS

MOMENT THAT MATTERS MOST · STEPS 7 TO 10

Getting the right posts. She leaves Mango Tree, may not come back, and could come back with the wrong posts. It ends when she says "Yes, that's it."

THE MAIN PICTURE · STEPS 12 AND 13

A timeline where each dot is one post. Copied posts bunch together. She learns to read it once.

How it should work, not how it works today. Built on Mango Tree v0.12.0 screenshots, the CIB Mango Tree literature review (persona UXP09, paper P11) and the research on the two boards below: where to get posts, and how Mango Tree spots copy-pasta. Times, numbers, names and quotes are illustrative.
